**Supplementary Figure 1** Overview of genome-wide copy number alterations in 44 pheochromocytomas and 9 paragangliomas. Each row shows a tumour sample with a specific identification number and, if so, malignant (M) and/or paraganglioma (P) indicated to the right. Each column represents a chromosome. Three groups of copy number classes are illustrated: loss (green), normal (grey) and gain (red). White lines indicate loci not covered by the array.
