Supplementary Figure 1 Real-time quantitative PCR and macroarray results. A. Repartition of Survivin and its splice variant expression in the 135 breast cancer samples. The bold line represents the median value. B. Hierarchical clustering of genes differentially expressed between both Survivin-3B expression groups. 3B+ and 3B- respectively correspond to Survivin-3B expression superior or inferior to median expression level. Green and red colors represent under-expression or overexpression centered to median array values, respectively.
