

Supplementary Figure 3. Stable expression of empty vector (EV), wild type (P) or Ser71Tyr (S71Y) HA-tagged HIF2A constructs in 786-0 renal cell carcinoma cells without (-) or with VHL reconstitution (+). HA-tagged HIF2 α is undetectable in whole cell lysates of both P and S71Y HIF2A constructs in the presence of VHL, in comparison with their expression in 786-0 cells null for VHL. Cell extracts were immunoblotted with HA (for HIF2 α and VHL), beta actin was a loading control. Specific HIF2 α band is indicated.
