Supplementary Figure 5: Serum levels of miR-195 and miR-483-5p in three ACC patients before (Pre-Op) and after (Post-Op) surgical removal of the primary tumor. Patient 32 and patient 43 belong to the aACC group (stage II and stage IV ACC, respectively). Patient 49, who belongs to the naACC group (non-recurring stage II ACC), had undetectable levels of miR-483-5p in both pre- and post-operative samples.
