Supplemental Figure 3

The figure shows a bar graph comparing the relative cell proliferation of OECM-1 and SCC25-FAK cells treated with different concentrations of Tamoxifen and PF-431396. The x-axis represents the concentrations of Tamoxifen (0, 1 μM) and PF-431396 (0, 1 μM), while the y-axis represents the relative cell proliferation (%). The data is indicated with error bars and statistical significance indicated by asterisks (**, ***).
