Supplementary Figure 4. Chemokine, cytokine and growth factor secretion in 8305C and SW-579 thyroid cancer cells is significantly increased by LPA treatment (additional results to Figure 4). 8305C and SW-579 cancer cells were treated with 5 µM LPA for 24 h in 1% FBSC medium and medium was analyzed by multiplex measurements. Results are normalized to both total volume of medium and cell protein content. Results are means ± SEM from four independent experiments, *p<0.05 compared to no treatment, NS = not significant, ND = not detectable.
