Supplementary Figure 6. Chemokines, cytokines and growth factors increase autotaxin secretion from thyroid cancer cells (additional results to Figure 5). 8305C and SW-579 cancer cells were treated with 10 ng/mL CXCL10 (IP-10), GCSF, GMCSF, IL1α, IL1β, IL6 or sCD40L, or 50 ng/mL PGDF-BB for 48 h in 1% FBSC. Autotaxin activity in concentrated conditioned medium was normalized to cell protein content. Results are from at least three independent experiments. *p<0.05 compared to no treatment, NS = not significant.
