Supplementary Figure 2. Venn diagram showing up-regulated miRNAs in lymph-node and liver metastases compared to their primary SBNETs. Two miRNAs (miR-142-3p and miR-191-5p) were found to be significantly up-regulated in both lymph-node (LN) and liver metastases versus their primary SBNETs (adjusted P<0.05). Furthermore, 31 miRNAs were found to be up-regulated in liver metastases versus SBNETs including miR-122-5p.
