Supplementary Figure 3. Case studies reveal miR-200 family members are up-regulated in lymph-node and liver metastases compared to normal tissues and primary SBBETs. Bar chart demonstrating the NanoString expression changes in miR-200 family members (miR-141, miR-200a-3p, miR-200b-3p, miR-200c-3p) in matched tissues from (A) Patient #9 (T3N1M1) and (B) Patient #2 (T4N1M1).
