Supplementary Figure 7. Validation of miR-1 and miR-143 over-expression and inhibition in KRJ-I cells. KRJ-I cells (neoplastic enterochromaffin cells derived from a human ileal carcinoid) were transfected with the relevant precursor or inhibitor miRNAs (5nM) for 48 hours. The qRT-PCR data show relative expression of (A) miR-1 and (B) miR-143 normalized to U47 levels. Results are shown as mean of duplicates in one experiment ± SEM.
