Supplementary Figure 5 Shiota et al.

A. LNCaP and 22Rv1 cells were cotransfected with 0.5 μg of NF-κB reporter plasmid and 0.05 μg of pRL-TK. All values are representative of at least three independent experiments. The luciferase activity of the NF-κB reporter plasmid in LNCaP cells was set as 1. Boxes: mean; bars: ± SD. *P < 0.05 (compared with LNCaP cells).

B. Whole-cell extracts from LNCaP, LNCaP/MDV, C4-2 and C4-2/MDV cells were subjected to SDS–PAGE, followed by western blotting analyses of the indicated proteins.
